Abstract

The invention provides isolated nucleic acids molecules, designated 32374 or 18431 nucleic acid molecules, which encode novel protein kinase family members. The invention also provides antisense nucleic acid molecules, recombinant expression vectors containing 32374 or 18431 nucleic acid molecules, host cells into which the expression vectors have been introduced, and nonhuman transgenic animals in which a 32374 or 18431 gene has been introduced or disrupted. The invention still further provides isolated 32374 or 18431 proteins, fusion proteins, antigenic peptides and anti-32374 or -18431 antibodies. Diagnostic methods utilizing compositions of the invention are also provided.
